

*ServiceLink National Flood's Client Solution  
for FEMA's PRP Eligibility Extension Provision*

---

On January 1, 2011, the Federal Emergency Management Agency (FEMA) is implementing the Preferred Risk Policy (PRP) Eligibility Extension, a new flood insurance provision to the National Flood Insurance Program (NFIP) to provide a cost-saving flood insurance option for property owners whose buildings are newly mapped into Special Flood Hazard Areas (SFHAs). If a building in a moderate- to low-risk flood zone has been newly mapped into a high risk SFHA after October 1, 2008, it may be eligible for a flood insurance discount for up to two policy years.

Insurance carriers are required to implement procedures for notifying policyholders of their potential eligibility at least 90 days prior to policy expiration. To help support this new requirement, ServiceLink National Flood is offering reporting and automated ordering solutions, to include the following:

- Indication of possible eligibility for PRP Extension for new orders
- Historical zone and map information for properties newly identified in SFHAs
- Monthly reports of upcoming map revisions

To ensure that all potentially qualified properties are identified, SLNF's proprietary process will check every order submitted for eligibility based on FEMA flood map revision date and current flood zone. Flood determination orders for properties that are likely candidates for PRP Extension will include an additional page with historical flood information and links to helpful resources.

Historical flood zone and map data is available as part of the standard flood determination product and via XML interfaces. Customers interested in opting for this new service and/or in obtaining more information should contact ServiceLink National Flood at 800.833.6347, option 4 or by emailing [floodinfo@bkfs.com](mailto:floodinfo@bkfs.com).
